

Project Milestone 3

Features completed

- Interactive User Profile
- Login Page
- Registration Page

Successful Demos

We were able to successfully navigate from the Login page to the Registration page via the “Create new account” link. Navigation bar worked correctly on all pages. Registration page successfully transitioned to the Student Profile page. “Update Account” function worked.

Complications, Obstacles

- Starting the database was trickier than expected
- Unexpected scheduling conflicts with other classes
- Unexpected illness

TA Suggestions

- Adjust the Backend part of the Architecture Diagram to more accurately visualize the role of Heroku, Node.js, and the Database.
- You don't have to store files themselves in the database, only the path. Docker can be used as a file system.
- You should be able to develop locally this week

Individual Contributions:

Grace: Walkthrough presentation, debugging, Jira page management, Amazon RDS Database initialization, Team meetings

Mark: Presentation contribution, Password constraint updates, Admin Page, Team meetings, meeting log

Sean: Presentation contribution, Registration page, css formatting, script layout for userdata table, Team meetings

Ethan: Presentation contribution, User Profiles, User Profile 'update' function, Team meetings
